Keywords: network, entrepreneurship, added value chain, innovation, export, income, population employment.

Introduction

Recycling in the world in the face of intensifying global competition agricultural raw materials and food of industries and population the importance of the agricultural network that meets the requirements for its products is increasing. According to statistics, "world agriculture today 1 billion of the economically active population. provides employment to more than one person, it is also about 5% of the total products produced in the world corresponds to the contribution of the network. Forecast data shows that by 2050 and the world population is 9.1 billion. can reach a person. In this case, the world's population the demand for meat and dairy products is 2.5-3.0 times higher than today is expected to increase". Changes in the world commodity market infrastructure, retail and

wholesale emergence of modern forms of trade, competition of enterprises and innovative activity in the fight for the consumer and their purpose, interest, Differences in functions and processes are significant in modern sales marketing requires changes. Development is considered the main object of trade marketing business between manufacturers, distributors, wholesalers and retailers long-term and mutually beneficial cooperation based on relations issues of strategy development are considered as priority tasks. Trade-logistics, sale and storage of fruit and vegetable products in Uzbekistan coordination of processes, effective marketing in business aimed at achieving economic growth based on the use of strategies directions are given special attention.

Analysis of literature

Today, it is related to business activities in the Republic of Uzbekistan scientific studies are widely covered in the economic literature. R. Cantilon in sales and purchase in the management of business activities as a basis in their research on how important the risks are brought According to him, the result of the first and last action of the entrepreneur is to buy which may arise as a result of risks between acquisition and sale is a process dependency. A. Turgo is high among entrepreneurs in managing business activities management emphasizes the importance of capacity building because every What a smart manager through his ability to create harmony among employees and can achieve a conflict of interests. Unlike R. Cantilon, A. Turgot is a capitalist and an entrepreneur was able to clearly show the different aspects of their concepts. A. Turgo that an entrepreneur, first of all, is an important factor in the proper organization of management cited in his scientific research. In particular, economists A. Olmasov and M. Sharifhojaev "Entrepreneurship is not just about making money, but income through creative activity is a factor of getting" he states. That is, business activity is to earn income intended economic activity, if it is not regularly activated, They reasoned that economic growth does not occur, and they are precisely the quality of entrepreneurship consider that it is necessary to pay attention to this aspect. In our opinion, A. Olmasov and M. Sharifkhojaev organized business activities the need for a special innovative ability from the leader in creating and managing, market management as the most important aspect of the entrepreneur's future meant to cause him to do it. Currently, the market demand is also people from the development of cheap and high-quality products that meet all the requirements for their needs consists of Socio-economic problems of business development Q. Muftaydinov "Entrepreneurship is economic activity The market economy is the driving force of the economy taking into account business activities and consumer requirements under the conditions, ensures the continuity of extended reproduction passed. From this we can understand that Q. Muftaydinov's business activities it is important to pay special attention to the principle of continuous production in management counted The relevance of this principle is that of goods in consumer markets with the fact that the short life cycle does not have a place in the market for a long time is described.

Economist U.V. Gafurov "The state's support of small business entities regulatory forms and tools to the level of development of the small business sector he emphasized that it should be changed accordingly, and suitable means should be used. If we dwell on the essence of this approach, U.V. Gafurov entrepreneurship direct state participation in regulating the activities of entities, through certain means of the state in managing business activities focused on regulation. H. Abulqasimov and A. Kulmatov are not allowed to do business by law He described it as a type of economically productive activity that has not been carried out. According to him, provided that the entrepreneur does not deviate from the law holds Therefore, the legal activity of an entrepreneur, from the point of view of the law, guarantees the level of protection. Based on the above comments, we can say that It is possible to develop business activities of today's entrepreneurs to change the tasks they set before themselves, i.e. to an innovative environment requires flexible and flexible decision-making.

Research methodology

In these studies, the strategy of economic development of the agrarian sector development, population growth and demand for agricultural products ensure proportionality with the increase in output volume, stable agrarian sector development, specialization of production processes, modern economic operator using innovative technologies and methods increase the level of economic efficiency of entities, impact on their activities comprehensive statistical research of determining factors, ensuring competitiveness shown as priority areas of scientific research in this regard is happening Analysis and results The agrarian sector in Uzbekistan is food and agriculture while ensuring the demand for products, the country's export potential a farmer specializing in the field for the past years, serving to increase especially to the issues of promotion and development of farms attention is being paid. In particular, the development of New Uzbekistan in 2022-2026 in the strategy "...the most priority to be implemented within the framework of the development strategy one of the tasks is agriculture for the development of the national economy to radically increase its efficiency and diversify it, that is, the agrarian sector development, processing of agricultural products on a cluster basis and ensuring food safety, standard of living of the population living in rural areas and it is necessary to increase the quality, double the income of farmers and peasants creating conditions, the annual growth rate of agriculture at least 5 percent priority tasks such as delivery" are defined. Over the past years, the agricultural industry in our country has been mainly cotton and Since it is specialized for grain crops, the above table in the data, grain has a very large share in the composition of grain and leguminous crops we can see that Corn grain, rice and others are in the next places that it has been leading types of leguminous crops (peas, beans, lentils). we will be able to see. At the moment, the total amount of agricultural products grown is a farmer the share of farms is 53.1 percent, in total livestock products and it is 5.3 percent. Main export of fruit and vegetable products in foreign trade partner countries Russia (30.5% of the total volume), Kazakhstan (20.5%), Afghanistan (6.6%), China (5.7%), Turkey (4.5%) and Kyrgyzstan (4.3%). According to statistical analysis, there were 876 fruit and vegetable products in 2017 exported by the exporter to 60 countries, in 2021 1,175 the exporter managed to export to 67 countries

Conclusion

Today, the role of entrepreneurship in the agricultural sector It is advisable to implement the following measures in connection with the increase: - taking practical measures for the development of the agricultural sector, supporting enterprises producing exportable agricultural products, increasing production capacity at the expense of foreign investments through modernization and technological re-equipment, establishment of new enterprises increase in product production volumes; - foreign companies and agroclusters for foreign investment to further expand cooperation with, producing exportable products bringing technologies, international fairs organized in the republic wide use of opportunities; - comprehensive support of farms, their material and strengthening their financial base, creating new opportunities for them, service development of indicative structures; - modern agricultural enterprises that process their products to use the wide opportunities created for the purchase of technologies take relief measures; - raw materials, electricity for industrial enterprises established in rural areas continuous supply of energy, gas and construction of communication networks implementation etc.
