### **Abstract:**

Creating a favorable business environment in the country is important to ensure the safety of small business and private entrepreneurship.

**Keywords:** quality enterprise, business, method, mathematical model, economic security, coefficient of variation, confidence interval.

### **1. Introduction.**

Enterprise and account opening and approval of specified conditions, the right to independent legal entity subsidiaries, branches and representative offices, branches and other structural divisions of the external, to eat.

We will focus on state registration of enterprises (firms) and liquidation and reorganization of enterprises.

### **2. Materials and Methods**

In Uzbekistan, there are many small, medium and large industrial enterprises that cover almost all sectors of the economy: from heavy industry to light industry, agricultural processing and scientific production. His task is to preserve this wealth and more efficient use of this government. Agriculture is on this agenda, although social production has few deviations in efficiency, leading declines and squandering. Businesses are no exception.

### **3. Results and Discussion**

The analysis of the legislation adopted over the past years aimed at the mass regulation of entrepreneurial activity shows that the dynamics of mass regulation of entrepreneurial activity in Uzbekistan is constantly changing. For example, An increase of the influence of public law in the legal regulation of entrepreneurial activity can be seen by the following decrees: the decree of the President of the Republic of Uzbekistan "On the introduction of a state monopoly on the production

of alcoholic beverages" (June 19, 1997) PD-1790, "On the introduction of excise tax on certain types of exported goods" (October 1, 1996) No. 343, resolution No. 532 "On Additional Measures to Strengthen State Control over the Production and Sale of Certain Types of Goods" (December 23, 1998). While PD-4354 of August 24, 2011 "On additional measures to create a favorable business environment for the further development of small business and private entrepreneurship", August 25, 2011 "Measures to eliminate bureaucratic barriers and further increase the freedom of entrepreneurial activity" Resolutions No. PD-1604 have sharply reduced the level of public-legal regulation of entrepreneurial activity.

It is also possible to observe an increase in the public-legal influence of the state on certain issues in the economy, including business activities, quarantine regulations introduced to prevent the entry and spread of the coronavirus COVID-2019 in our country.

#### **4. Conclusion.**

Disclosure of today's market relations, especially from the point of view of competitive confidentiality of business and production secrets of the enterprise, can negatively affect its condition and lead to the loss of consumers of products. According to experts, the loss of a quarter of business data is also an excellent opportunity for competitors, and half of the companies that published the data within a few months may go bankrupt.
