Keywords: *education, view, opinion, primary school, teacher, development.*

Education is one of the most important aspects of a humane life, showing deep influences on the development of personality and human behavior. With upbringing, it begins from the earliest adulthood and lasts throughout his life, showing a direct influence in the development of individuality and social adaptation.

Of course, the main goals in education include the formation of moral values, as well as the development of intelligence and culture, creativity, social responsibility and the ability to interact with the surrounding world. In our topic, we are looking at education in elementary school. The most important thing is that the student should receive education from two sides, that is, from the parents, but also from the teacher.

Primary school education plays an important role in shaping a child's personality. To do this, the teacher tries with all his might to give them a good upbringing from the very first day of study. Educates each child how to behave in class and others. Because of this, this period of study is key for the development of moral, social and emotional skills in children. In this article, we will consider the main aspects of education in primary school. Which play a major role in the life of every student.

The most important principles of education in primary school

1. Individual approach. A teacher should have a unique approach to each student, so it is important to take into account his individual characteristics and needs when organizing the educational process. With the same approach, students relax and work without difficulty, not thinking that they will make a mistake, etc.

2. Promoting personal development is one of the best principles of parenting, which is the goal of parenting. The purpose of primary school education is to help children become independent,

responsible and ethical individuals. That is, it says that every child, after an explanation, begins to work independently without the help of a teacher or parents.

3. Formation of value orientations. This is one of the principles that should awaken a child's moral qualities for his homeland and nation, school, etc. In turn, the school should assist in the formation of values among students, such as hard work, honesty, respect, and love for others.

4. The foundation of a favorable educational environment. This principle is necessary so that every student should learn about it at school, in the classroom. It is important that the school environment is friendly, safe and supportive of every child's development. This opportunity is awakened by the teacher, finding an approach to each student.

Next, you can consider the methods of education in elementary school.

Methods of education in primary school

1. Exemplary behavior of teachers. Teachers are the most important educator in primary school, as a result of this, their behavior and attitude towards students makes great sense in the upbringing of every child. because, looking at teachers, students develop further.

2. Social events. In conducting general events, extracurricular activities and sports competitions, to promote the development of friendly views between students. It awakens every child to be kinder to other people.

3. Game techniques. Play is the most important element of education in elementary school, because through play, students learn to cooperate, find solutions to conflicts and form creative thinking. With this method, the child is not only brought up, but also develops his thinking, memory, and imagination.

With the same great thinker spoke about education like this: "A teacher without love for a child is like a singer without a voice, a musician without hearing, a painter without color" - T. Goncharov. T. Goncharov wanted to say with this that if a teacher does not have good knowledge, then he is not a teacher who can to give good knowledge and education.

Primary school education plays a major role in the development of each student's personality. The most important principles of education contain individual approaches, support for personal development, education of value orientations and the creation of an approving education in the environment. Methods of education include exemplary teacher behavior, social events and game techniques. It is important that primary schools provide children not only with the knowledge, but also with the skills necessary for a successful life in society. But at the same time, parents should not stay on the sidelines either. They should also invest their efforts in raising their child.
